Extra Muros

Studiengang Retail Design

25.05. bis 30.05.2014

Basel, Zürich, Männedorf,
Weil am Rhein

Für die Studierenden des Retail Designs bilden die „Extra Muros“ Exkursionen die Chance auf eine gleichermaßen interdisziplinäre Zusammenarbeit mit Planern, Architekten und Designern wie auch internationale Zusammenarbeit mit den Kooperationspartnern.

Vitrashop Gruppe

Die Vitrashop Gruppe (Visplay, Vizona, Ansorg) gehört zu den Gründungsförderer und Haupt-Kooperationspartnern des Studiengangs Retail Design der FH Düsseldorf.

O₂ Retail Design Lab

Supervised by Constanze Paul,
Prof. Dr. Rainer Zimmermann,
Prof. Philipp Teufel

What do we want to achieve?

Desired achievements:

- Overall: How does the optimal o2 store look like?
- Trends and customer insights to be considered.
- Subject are exclusive o2 stores

We need answers on the following questions:

From a customers point of view:

- How can we attract customers to come in? How do we guide them in store?
 - What do customers expect, how can we excite them at pos, poe?
 - What is the ideal customer flow in smaller and bigger stores, platinum-gold & silver, bronze cluster.
 - How can we as o2 differentiate?
- Example: o2 Guru? Waiting-time-management? Appointments?

In terms of optimal product presentation-split:

- How do we present hardware and accessories at pos?
- How many topics can we consider, no overload and still an o2 store?
- How can topics interact at pos e.g. hardware, accessories, use-cases.
- Can verticals or cooperations be advantageous?

In general:

- How can we consider regional aspects at pos?
 - What are the biggest trends and how can we consider them? Also shop-in-shop, pop-up-stores.
-

O₂ Retail Design Lab — POS pitch

O₂ Exhibit Store

1st Price by Marvin Hüttermann,
Benedikt Grischka

Ein zeitgemäßer Telekommunikations-Store darf sich nicht ausschließlich als Verkaufsstore de nieren, da der Verkauf von Geräten und Verträgen in gleichem Maße im Internet geleistet werden kann. O2 kann dem Kunden einen Mehrwert bieten, indem der Besuch des Stores zum Erlebnis wird.

Der O2 Exhibit-Store vereint Verkauf und Ausstellung. Die Produkte – damit sind in erster Linie mobile Endgeräte gemeint – werden zum Medium und Teil einer Inszenierung. Dadurch werden sie zum Symbol für Vernetzung, Vielfalt und Individualität. Die Geräte sind Teil einer Wand- und Schaufensterinstallation und ersetzen jegliche weitere Displays im Store.

Der O2 Exhibit-Store beinhaltet neben der Produktinszenierung essentielle Store-Elemente: Eine analoge Vertragspräsentation, den Explorebereich, die Zubehörwand sowie die Möglichkeit des intensiven Beratungs- und Verkaufsgespräches. Er vermittelt durch seine Ästhetik, Materialität, Farbe und Lichtstimmung ein Gefühl von Ehrlichkeit, Offenheit und Wärme.

Zudem lassen sich durch das offene System ständig neue Inhalte generieren, die ein abwechslungsreiches Erlebnis im O2-Store garantieren – zu jeder Minute, jeder Stunde, an jedem Tag. Der Store ist in seiner Struktur skalierbar, modular und anpassungsfähig.

re.lab – euroshop

retail future lab

re.lab shows a range of statements, concepts, design studies, art work and experiments on future challenges for stationary retail, developed by students of retail design, exhibition design or communications design.

It is dedicated not only to future challenges but also to future people in retail design and embodies meeting and dialogue center for the occupational area of retail design & communications at Euroshop 2014.

Proudly presented by:

Contemplative Move

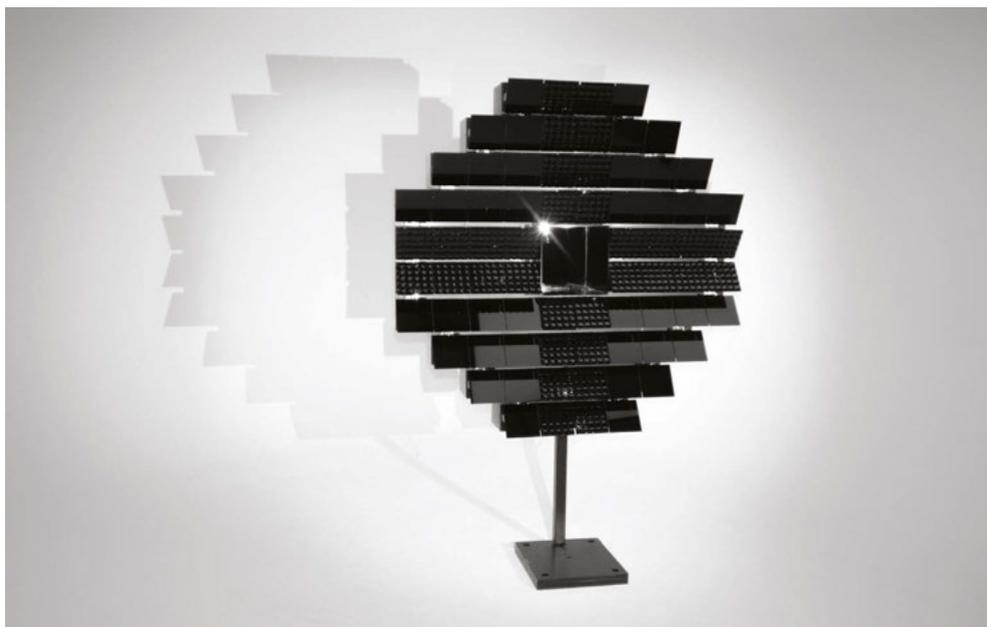

by Nadine Nebel

My kinetic window dressing for the prestigious Swarovski Boutique on Zurich's Bahnhofstraße is constructed with 72 black glassy surfaces in the size of 15x15cm, out of which 32 are completely covered with each 25 black crystals, carefully produced and kindly provided by the House of Swarovski. The other 40 surfaces remain empty. A black cube is centered in the middle of my circular sculpture, opening its inner to visitors and presenting the desirous products of Swarovski. My intention was to create an atmosphere of tranquility in soft moving light waves, attracting passersby and enabling a moment of reflexion in reflections.

Reflections or glance, or better radiance and brilliance represent the very core of the material in my point of view. At nightfall the sculpture enfolds the kinetic play of lights, dancing beyond the window in the urban space. I think kinetic objects will become far more relevant for stationary retail in near future, because they emphasize a spatial store and product experience, while the internet provides just pixels, flat screens and no light scenography at all. For me is important, not to overact with visual effects, not to be intrusive or pushy in capturing the attention of somebody else. Seduce not conquer is the underlining message.

Physical music experience

by Roman Toenjes

The installation is intended as a show case für the music label DESOLAT and was developed during my Master degree at Exhibition Design Institute, University of Applied Sciences Düsseldorf. The ‚vinyl dome‘ will be used during music festivals, in clubs or exhibitions, performing the labels program and involving especially young visitors in the DJ business with analogous records. The dome is accessible and is made with 120m steel tubes, 250 records and 60 engines, moving and swinging the domes cupola. Visitors can check in and will be guided in operating the machine and managing smooth transitions from beat to beat. Individual music samples can be selected in advance with the DESOLAT display machine DDMO1, a self developed hybrid between jukebox and vitrine, enabling visitors to discover the DESOLAT spheres of music. The dome embodies both, music instrument and music archive, presenting the labels heritage, videos, infotainment displays, a DJ filter programm, record covers and more than five hours music on ten headphones simultaneously.

VECTORSHOP

by Maximilian Volkenborn,
Bastian Wolff

A NEW SCALE FOR THE WORLD OF SALE:
SHOPPING MALL ON 3 SQUARE METER.

Vectorshop is an investigation-
al store concept that attempts to
prove its value in future retail
challenges. In consideration of
consumer's rapid rising interest
in digital ways of distribution,
our goal is to unite the character-
istics of stationary and digital
retail into one physical store, to
accomplish a new fascinating expe-
rience of shopping.

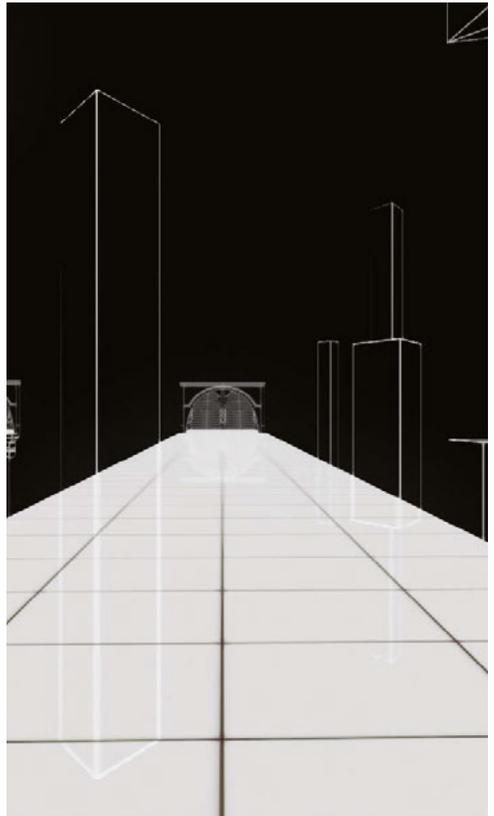

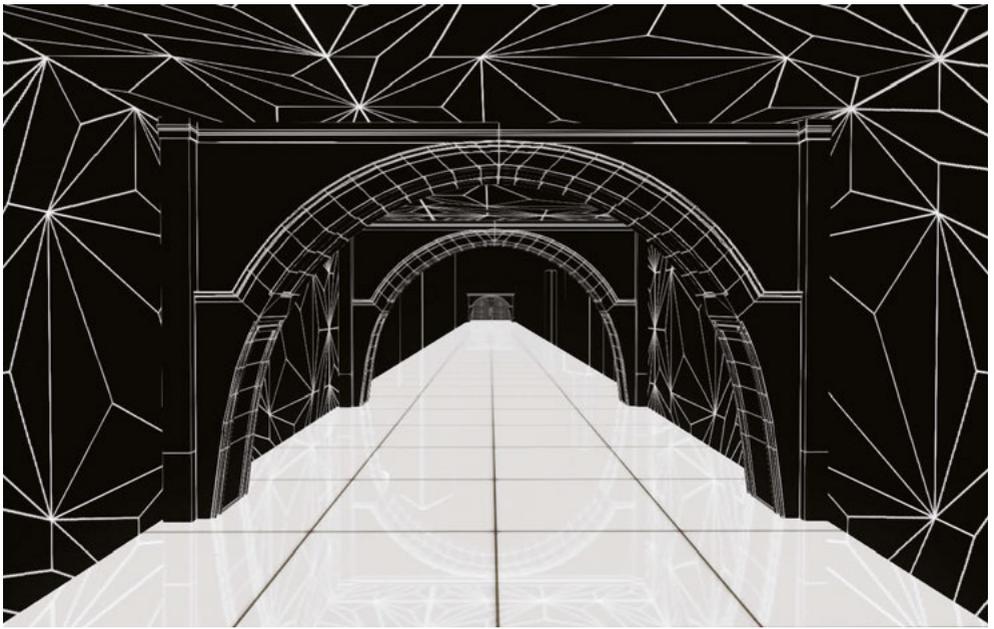

We look forward to connect these
characteristics with much more em-
phasis on economic aspects, par-
ticularly the vast reduction of
sales area that drastically reduces
lease rental charges.

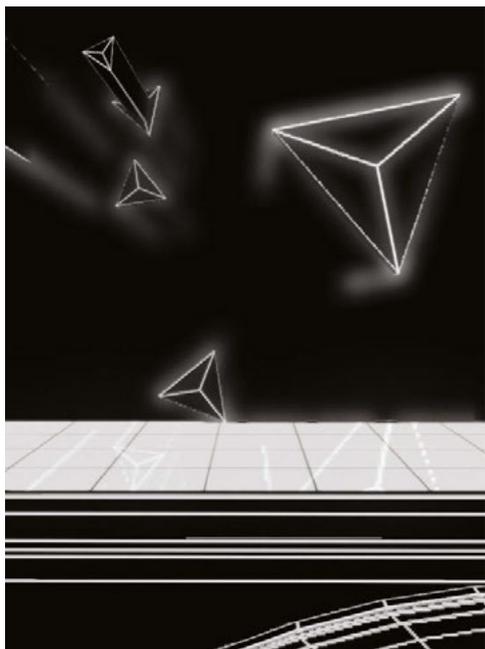

The project essentially benefits
from high-tech equipment that is
yet in children's shoes but will
be established in near future and
used for a variety of applications.
The entire store display area is
a simulated virtual environment,
presented with the power of Oculus
VRTM's "Rift" goggles.

BRAIN WATCHING

by Martin Schöne, well...come21
neuro-esthetical feedback

Martin Schöne is scientific researcher/inventor and artist and has developed a new methodology in image processing of brain activities. His 'brain avatar' shows an analogous, original and real time representation of brain activities, based on a direct translation of brainwaves, beamed and visible on screen. Visitors can watch their brain working and see different structures, shapes, configurations and rhythms while concentrating on changing issues. The brain avatar might be used as a success feedback machine on retail design scenarios, being watched and neurologically and emotionally assessed by the brains of a test panel. Martin Schöne will be present on Euroshop from February 18-20 and conduct performances and lectures between 10am and 3pm.

BLACK CUBE

by Luis Torres and Tania Rebollar

zero energy pop up store

»,green' used to be color, but it has taken on new meaning, representing an increasing demand for a lifestyle that does not compromise the environment.«
- Steve Bishop and Dana Cho

An average retail store swallows 150kWh energy per m2 and year, out of which 54% are spend for lighting. Accordingly each square meter causes 50 kilogram CO2 emissions per year. 100 square meter sum up to 5 tons. We thought this is a pretty lot of wasted energy and emission and tried to change the game. The major reason for high energy consumption in retail lies in permanent lighting. All products have to be illuminated always, says the dogma, regardless whether somebody is watching or not. So we switched off central power supply and overhanded shining power to the customer, which is of course sustainably produced. We used ,Little Sun', a solar light device created by the artist Olafur Eliasson as a self-directable source of lighting in the dark of our black cube. The cube architecture is inspired by Rubiks Cube and made with ecofriendly materials and low cost. It represents 8 square meter with zero emissions instead of 400 kilogram per year. Well, it is just a little black cube. Rolling out the principle could save us billions of tons. Shine a light!

Luminous Collection

by Leonidas Grecos

Luminous collection was developed in collaboration with the black cube project and follows the main idea of overhanding lighting power to the consumer. We introduce self illuminated clothing.

The difference of being spotlighted and shining on your own is a fundamental one. It is the difference between the consumer as object or subject of desire. We do expect fast progress in led technology and new possibilities to get light woven in textiles and the consumer empowered as an independent source of lighting.

STRÖER

Material SCOPE

by Joan Canda

Retail is a trend sensitive business, always pushed by everchanging styles and moods. Compared to a very fast moving change in retail offering, window dressing and visual merchandising, the store infrastructure and design itself normally remains stable for a period of 6-12 years. Especially the choice of materials will determine the store experience longterm. We took this asynchronous contradiction as a starting point and tried to speed up retail flexibility in materials choice and contemporary look and feel.

We conducted an investigation on store design materials with a 3D assessment matrix: costs, sustainability and hipness. Selected from hundreds, we will announce and present our TOP 5 retail materials 2014 forecast. Limited hand-made samples with indepth information and application advice can be bought at re.lab fair stand.

THE PRICE IS THE MESSAGE

When you buy a
t-shirt, you are
not just buying a
piece of fabric. You
are buying a message.
The price of a t-shirt
is a reflection of the
values of the company
that made it. It's a
statement. It's a way
of saying, "I care
about the environment."
It's a way of saying,
"I care about the
workers who made
it." It's a way of
saying, "I care about
the planet."

THE ART OF FLYING MERCHANTS

Excluding legal implications for a moment, we found there is a lot of inspiration for professional retail in flying cheapjack business. It is a smart business, very flexible, with no overheads at all. It can pop up any time and any place, where masses of consumers agglomerate. It is a lean concept without any trouble in stock management or supply chain, the assortment is limited by what a man or a woman can carry.

We just have to subtract one thing, the word 'cheap'. Because neither the professional retail industry nor we are interested in low margin business. So we decided to trade up the cardbox business and basically the cardbox itself. And of course we do not sell fake products, but a limited series of 24 t-shirts introducing the new fashion brand GUTSCHI to Euroshop 2014 fair show in Duesseldorf. Watch out, we just have one flying merchant moving around, it is a she and she is nervous, because the euroshop administration is not informed. She may turn abruptly, when you see her, and run away. At the end of the day we are not really interested to sell the t-shirts, nine customers have already subscribed and we want to keep a few for ourselves. So it is really up to you whether you manage to get one or not. Good luck and have a nice day!

SHOPHOPPER

by Janina Ungemach, Andrea Rohlfing

Due to a shopping culture of bargain hunters we are used to hopp and jump for the most economic offer. We are not hunting for the bear itself anymore, but for the cheapest way to shoot him - or shall we say: to click him? Have we lost our basic hunting instinct? Shophopper tries to reinforce our ancient and wild desire for hunting and animates people to combine shopping with physical action. We create a gamification scenario, where people can catch a product while jumping on a trampoline. And we investigate, whether people are willing to challenge themselves - for a lower price or for the opposite. The experiment has been conducted in a shopping mall in January 2014 and will be documented at Euroshop.

Superheroes

More Art, less Matter

by Tim Rausch, Marc Metzler
Lena Hartung, Bachtiar Baba Sheikh

Windows are still one of the most important attraction factors for stationary retail, intended to capture attention and desire in the eyes of window shoppers or passers by. Compared to the importance in customers purchase decisions the average design of windows is still poor. Windows are usually overloaded with items and do not focus customers attention or emphasize a special product. The global, standardized army of window dummies is kind of a clone army and does not provide any surprise or unconventional visual experience. We tried to develop a different setting and scenery, inspired by artists like George Segal and Alberto Giacometti. Handmade dummies unfold individual facial expressions and gestures and play the leading role in our arrangement.

The Price is the Message

by Stephanie Ahlborn, Jana Heimann, Nils Groenenstijn

Clothes make people, a wisdom probably older than the fashion industry itself. But when we use the metaphor ‚making people‘ we basically mean ‚upgrading people‘. This is common knowledge, common sense for centuries: you can trade up yourself with a better outfit. But what is a better outfit? One of the most popular assumptions is to recognize brand names as a sign of quality. You may remember the glorious 1980ths, when the labels on t-shirts went from the inner side to the exterior, when the Armani logo wasn't longer a hidden proof of heritage, but an obvious statement of lifestyle and purchase power. Said in the words of Marshall McLuhan, the branded shirt became the message.

afew Pop-Up-Store

by Tino Mazzoli

The “afew Pop-Up-Store” is a sneaker store concept with a 55 inch „multitaction cell display“ as key element. On contact the touch-screen has the ability to recognise any amount of hands and objects through a 2D-marker and displays relevant product information. This gives the customer a playful method to intuitively research products and the brand itself. The “afew Pop-Up-Store” links analog with digital shopping and creates a new shopping experience, giving more appeal and excitement to making new purchases.

The temporary appearance of the store and the psychology behind the limited availability of a product give our fashion- and life-style-conscious urban target group a feeling of exclusivity. Additionally, this concept counteracts the increase of empty retail spaces on the high street.

NIKE AIR MAX
Der Nike Air Max 1 wurde im Jahr 1987 als erste Air-Max-Schnecke entwickelt. Er revolutionierte die Laufschuhwelt mit dem ersten Air-Element, das die Luft in den Schuh einströmen lässt. Seitdem ist der Air Max 1 ein Klassiker, der die Welt der Sneaker-Liebhaber begeistert.

CYBORG DISPLAY

by Alexandra Fofie,
Joudia Alhadreui, Lisa Ruedel

As a cyborg we describe a hybrid of machine and living organism. People whose bodies are complemented by durable artificial components are also known by this term. The difference with robots is that cyborgs are altered biological life forms and robots consist of pure technology. Starting point for this consideration is the natural evolution, the adaptation of organisms to new environmental conditions. In modern biotechnology, there are efforts to combine technology with biological elements. In the medical context, the use of complex technology is nothing new, e.g. pacemakers, hearing aids or complex prostheses. In the technical sense about 10 percent of the current population of the U.S. are already cyborgs. However, the basic idea of technological functional ingredients is older than the concept of the cyborg itself. We can speak of a connection between the Enlightenment and the „Prothetisierung der Welt“ which means a form of emancipation towards nature (Bernd Flessner). Even in science fiction there are cyborg fantasies before the term was coined.

Resi Lecker Baguette

by Theresa Siebein

Resi Lecker Baguette is a one-(wo) man-catering-company on a bike. During the weekdays she delivers to Düsseldorf offices that are situated in infrastructurally weak areas.

In her bicycle-case you will typically find the »Rote Baron«, a baguette with a beetroot-lental-burger, fetacrème and young spinach or the »Goldmarie« with curryfalafels, a roasted eggplant-sesame-crème and salad. Tasty salads and chilled drinks also fit into the lower parts of her customized transport-case. All these things are personally hand-made by Resi, are fresh, colourful, vegetarien, tastey and will fill you up nicely. The Baguette itself is provided by one of the best bakers in town that cooperate with local mills and producers. The investment and risk were low, the concept turned out to be a success. The limitations of the bicycle actually make it something very special and thats why her customers are already waiting in line with gleeful anticipations before she even arrives at the respective location. However, Resi is working on making her delivery service more economic to reach more people that value quality. An electrically powered Ape Piaggio could be the logical next move. Naturally, the delivery bike will keep on riding alongside.

MEAT SUBLIMATION

by Sarah Weber, Anne Wever, Sarah Meyer, Teresa Prosch, Kexin Jiang, Martina Mateva

The tremendous consumption of meat in saturated societies is about to become a problem - especially in terms of climate change. The Green Party in Germany tried to establish a 'Veggie Day' once a week, but the public feed back to this proposal was devastating and diminished the votes for the Greens. People are dependent on meat, they are used to need it, they do not want to change their habits. So we thought about a sublimation of our hunger and developed various collections of t-shirts, decorated with masses of meat, ugly and shocking, pure and raw. Wearing those t-shirts could help breaking the habits, because the more often you see it, the less you want it for eating. Our t-shirts might also be used by vegetarians as a provocation for meat eaters. We doubt someone will enjoy his steak when confronted with our art work. Learn to sublimate your lust for meat, discover its visual power, don't eat it. This is our message.

VMW Award 2014

sponsored by Mavis

Nadine Nebel konnte die Experten-Jury mit ihrem Exponat „Contemplative Move“ überzeugen und kann sich über den Preis freuen. Der Förderung umfasst eine Studienreise des dlv-Netzwerk Ladenbaus nach New York mit dem Schwerpunkt „Shopfitting & Visual Merchandising“. Der Gewinn wird von der Mavis GmbH gesponsert und hat einen Wert inkl. \$ 500,- Preisgeld in Höhe von EUR 4.000,-.

Die Gewinnerin über Ihr Konzept:
„Im Einzelhandel spielen kinetische Objekte eine immer größere Rolle. Die menschliche Wahrnehmung ist so ausgelegt, dass wir sich bewegenden Dingen mehr Aufmerksamkeit schenken als statischen. Wichtig dabei ist, dass diese Objekte ins Auge des Betrachters fallen, jedoch in einer von Stress und Zeitmangel dominierten Welt nicht aufdringlich wirken und schnell zu erfassen sind. Der Passant kehrt zurück zum passiven Betrachter, der entscheiden kann, wie viel Aufmerksamkeit er dem Objekt schenken möchte. Es gibt nur wenige Bewegungen, die für uns Menschen visuell so angenehm erfahrbar sind wie die des Wassers oder die des Feuers. Somit ist die Arbeit „Contemplative Move“ eine Antwort auf die Frage: Was ist bei der Generierung des meditativen Effekts tanzender Flammen und schwingender Meereswellen zu berücksichtigen?

Das Zentrum der kinetischen Schaufenstergestaltung für die Swarovski-Boutique auf der Züricher Bahnhofstraße wird durch einen vorne geöffneten Kubus geziert, der

die hauseigenen Produkte in Szene setzt und als Ausstellungsfläche dient. Diese atmosphärische Installation hat zum Ziel, die Passanten durch ihre sehr ruhige und meditative wellenartige Bewegung anzulocken und in ihren Bann zu ziehen. Durch die Art der Bewegung werden Glanz und Reflexion – wesentliche Eigenschaften der Kristalle – in den Vordergrund gestellt. Bei Einbruch der Dämmerung verwandelt sich diese Ausstellungsfläche in ein angenehmes Lichterspiel. Die Reflexionen gelangen durch das Fenster in den Stadtraum und „tanzen“ in ihrer eigenen Ästhetik auf dem Gehweg vor der Boutique.“

The background of the page is a soft-focus, yellow-tinted photograph. It shows a hand holding a pen over a document, with a yellow highlighter visible. The text is overlaid on this background.

branding, campaign & exhibition system

by Robin Hartschen

The re.lab branding concept works with the discreet charm and low tech look&feel of receipts and sales checks. Cheesy colors have been chosen intentionally. The trade fair signage for re.lab was build with over-dimensioned receipts, hanging from the ceiling. Each exhibit or performance was equipped with a printer, who printed a project explanation on a receipt right on demand. Visitors just had to press a button to receive their individual receipt. Following the overarching tagline of the re.lab stand 'nice messages for sale', the receipts confirmed the customer's reception of a exhibit and provided a little message to take away.

street art campaign

Matthias Hohmann

Commercials are the announcement for products and labels. It is in direct communication with the user. it is the languages and the spoken word between sender and acceptor. In the world of media 18/1 posters work as a traditional and successful organ of commercials. In cooperation with STROER ten artists, designers and illustrators created seven posters in a very individual performance.

The poster is a daily media. It is surrounded by a lot of different competition so it have to fight for attention every day again. The eye-catcher is not just the motive and the message, but also the production of the media. Because of this we created the idea to produce the poster on its place and in a individual way. So we generated more views on a single poster by performing its production. by longer days production we also created the curiosity of the viewers all over the city of duesseldorf. Ten different designers engaged the theme "retail of the future" on its own view and style. We created the posters before the Euroshop trade-fair so its transported the information about as well. Mission completed.

D'art Design Group

Unsere Welt ist komplex und multisensorisch. Kommunikation im Raum ist deshalb wechselwirksam und besteht aus einem System unterschiedlichster Anknüpfungspunkte, die miteinander interagieren. Was heißt das aber für die Gestaltung dieser Räume? Dreh- und Angelpunkt ist der Mensch – mit allen Sinnen steht er im Dialog mit seiner architektonischen Umgebung. Er verändert sie und wird in gleichem Maß von ihr verändert. Das können sich Marken zunutze machen und so zu einem begreifbarem Realerlebnis werden. Zu einem Erlebnis das emotional, inspirierend und spontan begeisternd wirkt.

Anhand von vier Projektarbeiten thematisiert Guido Mamczur, Managing Director der D'art Design Gruppe, wie Marken zu Erfahrungs- und Erlebnisräumen werden.

– Guido Mamczur

brain watching

In der Wirkungsforschung ist die Einschätzung und Qualifizierung ästhetischer Gesamteindrücke schwierig, aber notwendig. Befragungen sind aufwendig und die Ergebnisse werden oft durch individuelle und kulturelle Voreinstellungen überlagert.

Um universelle/überkulturelle Kriterien und Parameter direkt zu erhalten, wurde neurobiologische Unterstützung für die Qualifizierung gesucht. Um unsere Gehirnzustände einzuschätzen und die Ordnungen und Qualitäten zu entdecken, können nun die gemessenen elektrischen Frequenzen der Gehirnaktivität mechanisch

simuliert werden, um sie direkt darzustellen im sog. Brain-Avatar. Bisher sind 10 Zustände des Gehirns identifiziert und qualifiziert worden. Im Vergleich zu anderen bildgebenden Verfahren können erstmals Qualitäten und nicht nur Quantitäten dargestellt und interpretiert werden. Neben der Wirkungsforschung bieten sich auch direkte Nutzungen als Neurofeedbackgerät an, die auch anspruchsvolle Nutzer anzieht.

– Martin Schöne, Well...come 21, Berlin

my PoS Framework

Eine moderne PoS-Steuerung erfordert aktuelle und korrekte Informationen. Um diese Informationen nachhaltig und einfach aufbauen und kontrollieren zu können, wurde my PoS Framework entwickelt. Es ist eine Kommunikationsplattform, die alle Fragen zu Standorten und Mediadaten beantwortet und allen erforderlichen Nutzern Zugang zu diesen Informationen bieten kann – so senkt es interne Aufwände und ermöglicht schnelle Entscheidungen und Zeit für den Blick nach vorn.

Es besteht aus zwei unabhängigen Funktions-Bereichen: dem Store Manager und dem Media Manager. Der Store Manager ermöglicht einen direkten Blick in alle Standorte; innovativ, nachhaltig und ohne Excel.

Mit ihm werden Informationen zu Stores, Produkten, Lieferanten und Motiven zentral organisiert und Workflows sowie Verantwortlichkeiten abgebildet und gemonitort.

Die ermöglicht es Unternehmen zu wachsen, ohne dass Aufwände steigen.

Der Media Manager eröffnet die Möglichkeit einer freien Organisation

von Bilddaten; zentral, flexibel und innovativ. Bilddaten können nachhaltig archivieren und Lizenzen zeit-sparend überwacht werden.

Es ist eine Sharing-Plattform, um Bilddaten einfach an Abteilungen und Partner zu verteilen und dabei Verantwortlichkeiten und Berechtigungen abzubilden.

– Marina von Morr

The aesthetics of catastrophe

Manu Washaus berichtet in seinem Vortrag „The aesthetics of catastrophe“ über seine konzeptionelle künstlerische Arbeit. Das kollektive Erinnern an gesellschaftliche Ereignisse, Kriege und Katastrophen ist oft an Fotos und Bilder gebunden. Diese Bilder werden immer ansprechender, schöner und ästhetischer und verschleiern damit das Leid vor der Linse. Manu Washaus nimmt diese Bilder und schmückt mit ihnen Alltagsgegenstände, wie zum Beispiel Pullover. Die Arbeit „SWEATER - study of the possible II“ wurde in einem Sweatshop in China hergestellt und besteht aus fünf Pullovern, die Motive der zusammengestürzten Textilfabrik in Bangladesh tragen. Die Tragikbilder der billigen Modeproduktion wurden so zu wunderschönen Modeobjekten, in denen das Leid immer sichtbar bleibt.

– Manu Washaus

Adidas global retail

World Class Retailer haben die richtigen Produkte, zur richtigen Zeit, mit den richtigen Prozessen, mit den

richtigen infrastrukturellen Voraussetzungen wie Locations und Logistik, mit richtigen Preisen und somit richtig viel Erfolg - und Profit.

Aber welche Rolle spielt Retail Design hierbei? Ist Design messbar? Welchen Einfluss haben Store Design Konzepte auf den kommerziellen Erfolg eines Stores?

Retail Design ist sehr vielschichtig und zeigt sich in den unterschiedlichsten Ausrichtungen als ein dreidimensionales Spiegelbild der jeweiligen Marke.

„Der Mensch ist ein Umgebungskonsument - man kauft immer ein Stück Umgebung mit“. (Peter Sloterdijk).

In der Zusammenarbeit mit Design Agenturen entwickeln global agierende Retailer kommerzielle Markenarchitekturen mit dem Ziel Retail KPI's zu optimieren und zu maximieren und gleichzeitig ihre Marke zu zelebrieren und für Kunden erlebbar und begehbar zu machen. Da die Parameter wie Anzahl der Store Besucher, Anzahl der Käufer im Verhältnis zu den Besuchern, Anzahl der verkauften Artikel, Durchschnittsverkaufs-Bonus und durchschnittlicher Verkaufsproduktwert exakt und kontinuierlich gemessen werden, kann man durch gezielte Massnahmen punktuell diese Parameter einzeln durch Design Veränderungen beeinflussen, aber auch gesamtheitlich durch ein neues Store Design Konzept optimieren. Durch umfassende, globale Kundenbefragungen wird auch die Markenwahrnehmung dokumentiert und somit wird Retail Design sowohl kommerziell messbar, aber auch qualitativ bewertbar, da der Markenmehrwert ermittelt wird.

Aljoscha Höhborn

Was wäre, wären wir nicht allein?
Das Theater der Welt bringt Schauspiel aus unterschiedlichsten geografischen, politischen und sozialen Winkeln der Welt nach Mannheim, um gemeinsam die Stadt neu zu erfinden. Aber was wäre, wenn jemand käme, mit dem wir bisher nicht gerechnet haben? Als guter Gastgeber möchten wir, dass die Besucher sich wie zu Hause fühlen. Die jahrzehntelange Recherche und Archivierung von UFO-Sichtungen und -Abstürzen durch den Mannheimer Ufologen Werner Walter vom „Centrales Erforschungsnetz Außergewöhnlicher Himmelsphänomene“ haben es uns ermöglicht, die Trümmer von fehlgeschlagenen Landungen zusammenzutragen, um daraus eine außerirdische Heimat zu reproduzieren – ein interstellares Hotelzimmer. Wir nennen es das #whoof. Und sollte der unerwartete Besuch wie erwartet ausbleiben, ermöglicht der fremde Raum uns menschlichen Besuchern einen Perspektivwechsel auf den eigenen Planeten. Organisiert werden die gebrauchten Materialien von ortsansässigen Schrottplätzen & Holzwerkstätten. Auf Grund der Ähnlichkeit mit Kornkreisen stellt der Friedrichsplatz für uns die perfekte Landebahn dar. Dies lässt die Nacht im Hotel #whoof mit sternenklaarem Kuppelblick zu einem unvergesslichen Erlebnis werden.
